LEVI LINDENBAUM IN FRANKFURT A. M.

Bandage zur Linderung von Atembeschwerden.

Patentiert im Deutschen Reiche vom 5. Januar 1910 ab.

Die Erfindung bezweckt eine Erleichterung der Atmung bei solchen Kranken, die infolge von Erkältung, Fieber oder aus anderen Gründen nicht mit Leichtigkeit durch die Nase atmen können, und besteht im wesentlichen darin, daß ein dem Nasenrücken angepaßtes Sattelstück, das mit zwei in die Nasenlöcher eingreifenden Haken versehen ist, vermittels um den Kopf gelegter Gurte getragen und nach Bedarf hochgezogen wird.

Auf diese Weise kann die Nasenspitze emporgezogen und die Atmung auf mechanischem Wege erleichtert werden, so daß das schäd-

liche Einatmen durch den Mund nach Möglichkeit vermieden wird.

15

Auf der Zeichnung ist eine beispielsweise Ausführungsform dieser Bandage dargestellt.

## PATENT-ANSPRUCH:

Bandage zur Linderung von Atem- 20  
beschwerden, gekennzeichnet durch ein  
dem Nasenrücken angepaßtes Sattelstück  
mit zwei in die Nasenflügel eingreifenden  
Haken, das vermittels um den Kopf ge-  
legter Gurte gehalten und nach Bedarf 25  
hochgezogen wird.

A line drawing of a traditional Chinese sword (jian) resting on a wooden stand. The sword has a long, straight blade with a double-edged tip and a hilt with a pommel and a guard. The stand is made of wood and has a decorative finial on top.

Levi Lindenbaum in Frankfurt a. M.  
**Bandage for the relief of breathing difficulties**  
**Patented in the Deutschen Reiche on January 5, 1910**

The invention serves as a means of facilitating breathing in patients who as a result of colds, fevers or other reasons cannot breathe easily through the (5) nose, and [this] is essentially made possible with [the use of a] tailor-made saddle piece, measured to fit on the bridge of the nose that consists of two hooks grasping into the nostrils, by means of a belt (10) worn wrapped around the head and which can be lifted up as needed.

In this manner, the tip of the nose can be raised and breathing facilitated through mechanical means, so that harmful inhalation through the mouth may possibly be avoided. (15)

An example of the method of this bandage is illustrated in the drawing.

**Patent Claim**

A bandage for the facilitation of breathing (20) disorders, characterized by a tailor-made saddle piece that fits on the bridge of the nose and has two hooks that grasp into the nostrils, which through the aid of a belt worn around the head can be (25) lifted up as needed.

The Imperial Patent Office

Patent: Written Document No. 229378 Class 30d Group 20

Issued to Levi Lindenbaum, residence Frankfurt am Main, Germany

Bandage for the alleviation of breathing difficulties

Patented in the German Reich on January 5, 1910.

The invention has as its purpose the alleviation of breathing difficulties for those who are sick as the result of cold, fever, or for other reasons, and, who as a result cannot breathe through the nose easily. The invention consists of a piece fitted to the bridge of the nose with two hooks which hook into the nostrils. This apparatus is worn on the head by means of a strap which goes around the head and which can be pulled up if necessary.

In this way the tip of the nose can be pulled upward and breathing can be made easier, in order that the injurious breathing through the mouth may be avoided when possible.

In the drawing is an example of one way in which the apparatus can be constructed.

Patent Claim (Patent Anspruch)

Bandage for the alleviation of breathing difficulty, characterized by a piece fitted on the bridge of the nose and two hooks that hook into the nostrils. The bandage is worn on the head by means of a belt which also allows it to be pulled up when necessary.

PATENT SPECIFICATION

No. 229378  
Class 30 d. Group 20.

LEVI LINDENBAUM in FRANKFURT/MAIN

Bandage For Alleviating Breathing Difficulties.

Patented in the German Reich as of January 5, 1910.

The invention has the purpose of facilitating breathing in ill persons who, because of a cold, fever, or for other reasons, are not able to easily breathe through their nose, and is essentially characterized in that a saddle piece, which is adapted to the bridge of the nose and is provided with two hooks that insert into the nostrils, is worn by means of straps placed around the head and can be pulled upward if needed.

In this manner the nose tip can be pulled up and breathing can be facilitated mechanically, making it possible to avoid harmful breathing through the mouth.

The drawing shows an exemplary embodiment of this bandage.

PATENT CLAIM:

Bandage for alleviating breathing difficulties, characterized by a saddle piece adapted to the bridge of the nose with two hooks inserting into the sides of the nose, where said saddle piece is retained by means of straps placed around the head and is pulled upward as needed.
